Commemorate World SCD Day at the Sickle Cellabration!

Mary Bentley LaMar

Founder

Executive Director

June is always an exciting month in the sickle cell community. It is during this month that sickle cell advocates all over the world pause to commemorate the courage of individuals affected by sickle cell disease with (June 19th) World Sickle Cell Disease Day. At the SCANJ that calls for...

"A SICKLE CELLABRATION"

June 25th!!

We invite you to come out and enjoy our world festival of fun and learning for the

whole family. This year's program includes a Patient Panel on Self Management and our Patient Centered Outcomes Research Institute Project. You will enjoy international cuisine and celebrate the 2016 Frances T. Walton Scholarship Awardees. Another highlight is the selection of the new SCANJ Teen and Child Ambassadors. All of this and more takes place when the drums sound at the Garden State Discovery Children's Museum in Cherry Hill on June 25th from 9:30am-2:00pm.

Be sure to RSVP online or by calling our office at 973 482-9070.

Afterwords Part 4: The Cure...

Although not everyone is eligible for "the cure", there are many who are not aware of the procedure. We are speaking of the Bone Marrow Transplant (BMT).

Jennifer Krajewski, M.D., pediatric hematologist and oncologist at the Joseph M. Sanzari Children's Hospital at Hackensack University Medical Center (HackensackUMC), led the workshop and Lunch and Learn Patient Panel on BMT at SCANJ's Annual Symposium in 2015. It was eyeopening for many in attendance.

Attendees learned about pediatric Bone Marrow Transplants (BMT) from the doctor's perspective and from patients who have been cured after undergoing the procedure. Transplanted stem cells have to be provided from compatible siblings or from suitably matched unrelated donors (volunteer donors are identified through the National Marrow Donor Program or umbilical cord blood units).

Dr. Krajewski explained about the nationwide studies that led to expansion in donor eligibility. She designed a protocol to minimize the effects of treatment. These and other advances will enable parents to serve as stem cell donors. Potentially all severely affected sickle cell patients can be offered transplant therapy. This is good news!

Here's quick shout out to the families who attended the SCANJ POP Up Event! Advocacy and Awareness at the UniverSoul Circus. Did we have a good time? I heard that yes! It was great seeing everyone having a blast! And special thanks to volunteers from the SCANJ; Alpha Kappa Alpha Sorority, Pi Mu Omega and Omicron Xi Omega Chapters; and the Oranges Maplewood NAACP. Your support allowed us to raise SCD awareness and conduct voter registration drives during the 2 weeks of the UniverSoul Circus tour in Newark.

No time to rest. This newsletter has plenty for you to consider... Workshops, A Town Hall, Walks.

~Mary

Recognizing the need for better supportive care options, the team at HackensackUMC has been working with several companies to provide new bone marrow transplant drugs. Most recently, in order to provide a comprehensive option for sickle cell patients across the region, they have opened their own investigator initiated protocol for the transplantation of patients with sickle cell using unrelated donors.

HackensackUMC has the only pediatric stem cell transplant center in the state of New Jersey. They treat hematologic non-malignant diseases such as thalassemia, sickle cell, aplastic anemia, metabolic disorders, severe combined immunodeficiency and immunodeficiency syndrome. They have been performing transplants for patients with severe SCD since 1998. For more information on BMT you can contact HackensackUMC's Pediatric Blood and Marrow Transplant Program at 551 996-5600.

Afterwords; is a six-part newsletter series to shed insight on the topics covered during the most recent SCANJ Statewide Sickle Cell Symposium. The symposium is held annually on the Saturday before Thanksgiving at the Liberty Science Center in Jersey City, NJ.
